Stretch Out

A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

*Energy is
eternal delight.*

-William Blake

Even just a few minutes at work can help turn bad habits into good ones.

Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

Prevent the Afternoon Slump

Some Tips for P.M. Energy

Jerry V. Teplitz

If you're like most people, you've experienced the afternoon slump. You know the feeling -- it's only 2 p.m., yet you feel drained. Fortunately, you can employ methods to reduce the slump's frequency and shorten its duration.

DRINK WATER.

Your body uses water even if you're not exercising. If you wait until you feel thirsty, you're already dehydrated. Keep a water bottle handy all day.

AVOID SUGAR AND SIMPLE CARBOHYDRATES.

While a mid-afternoon candy bar may give you a quick rush, it actually worsens the slump. Instead, choose protein-rich foods and complex carbs.

EAT SMALL MEALS.

Have six small meals over the course of the day instead of three large ones. Big meals cause the digestive process to divert blood from your brain to use in the digestive track.

EVALUATE YOUR LIGHTING.

Most offices are lit with cool, white fluorescent tubes, which have a terrible effect on how people feel and function at work. A better option is full-spectrum, fluorescent tubes.

TAKE TIME FOR WALKS.

Walking gets your blood circulating, helps you breathe better, and stimulates your brain due to the increased blood flow. Take a 5- or 10-minute walk during the day.

MEDITATE.

Meditation is great for rejuvenating your body. By meditating for 15 to 20 minutes twice a day, you're keeping your body continually energized and rested.

TAKE TIME TO BREATHE AND STRETCH.

Deep breathing exercises give you an energy boost. Also, stand up and stretch to increase blood flow and stimulate the lymphatic system.

HANDLE NEGATIVITY.

Negative people and images can have a

draining effect on your energy. Make a conscious effort to stay positive.

Avoid the drain office settings can bring on.

Exercise Myths

Fiction Vs. Fact

Although old fitness fictions like "no pain, no gain" are fading fast, plenty of misconceptions still exist. Following are some of the most common myths, counteracted by the latest research.

FICTION: YOU WILL BURN MORE FAT IF YOU EXERCISE LONGER AT A LOWER INTENSITY.

FACT: The most important focus in exercise and weight control is how many calories are burned during the activity. The faster you walk, step or run, the more calories you use per minute. However, high-intensity exercise may be more difficult to sustain.

FICTION: IF YOU'RE NOT GOING TO WORK OUT HARD AND OFTEN, EXERCISE IS A WASTE OF TIME.

FACT: Any exercise is better than none. For example, regular walking or

gardening for as little as an hour a week has been shown to reduce the risk of heart disease.

FICTION: IF YOU EXERCISE LONG AND HARD ENOUGH, YOU WILL ALWAYS GET THE RESULTS YOU WANT.

FACT: In reality, genetics plays an important role in how people respond to exercise. Your development of strength, speed, and endurance may be very different from that of other people you know.

FICTION: THE HEALTH AND FITNESS BENEFITS OF MIND-BODY EXERCISE LIKE T'AI CHI AND YOGA ARE QUESTIONABLE.

FACT: The benefits abound! T'ai Chi, for example, has been shown to help treat low-back pain and fibromyalgia. Improved flexibility, strength, and stress management are just some of the

benefits.

FICTION: HOME WORKOUTS ARE FINE, BUT GOING TO A GYM IS THE BEST WAY TO GET FIT.

FACT: Some people find it easier to stick to a home-based fitness program. In spite of all the hype on trendy exercise programs and facilities, the best program for you is the one you will participate in consistently.

*He who enjoys
good health is
rich, though he
knows it not.*

-Italian proverb

Inflexibility is not how old you are, rather the length of time since you last stretched:) Unfolding from your day of repetitive postures will be rewarding before retiring for the night. Even twelve minutes of stretching each evening may be beneficial to you:) Let the stress and tension go. Take care! Best Wishes, Julia Cini
