### Bodywork Eases Migraines and Tension Headaches

Cathy Ulrich

"Do you get headaches?" I asked Cindy. She had come to see me for massage to address her neck and shoulder pain but hadn't mentioned headaches.

"Well, yes," she said. "I've always had headaches and, now that you mention it, they seem to be worse when my neck hurts." Cindy went on to say she suffered from them as often as 2-3 times a week and typically treated them with ibuprofen.

Like many Americans, Cindy suffers from chronic, frequent headaches. Her neck pain finally prompted her to seek help, but she was so used to the headaches, she thought they were something she simply had to live with.

#### MIGRAINES.

Migraine headaches occur when the blood vessels in the brain become dilated, usually due to a chemical reaction, such as food allergies or a stress response. They often start with visual disturbances and quickly develop into severe head pain accompanied by nausea, vomiting, dizziness, and sensitivity to light. They're usually felt on one side of the head, but can be on both sides. Migraines are often managed with medications and avoidance of foods known to trigger them, such as red wine, chocolate, aged cheese, and nuts. However, some bodywork techniques can also be effective in easing migraines or decreasing the frequency of these painful headaches.

#### TENSION HEADACHES.

Exaggerated by stress, tension headaches are related to poor posture, jaw problems (such as temporomandibular joint disorder, or TMJ), and neck pain. Many people describe a headache that starts at the base of the skull and then moves in an arc over the ears and behind

**The Appropriate Portion**

Freedom from chronic headaches is an option many Americans don't even realize is possible.

What Cindy didn't understand was that frequent headaches are not normal and, with a little proactive planning, there is something that can be done to manage and even prevent them.

## Types of Headaches

Headaches come in many varieties. Following is a short list of the most common types.

**Continued from page 1**

the eyes. Tension headaches are most often caused or exacerbated by poor posture, work station positions, and body mechanics, creating undue stress on the upper neck muscles.

#### MIXED HEADACHES.

The term mixed headache is used to describe a tension headache that leads to a migraine. Typically, the tension headache starts first and the chemicals produced from the pain of it create conditions for a migraine to develop. In people with patterns of mixed headaches, the best way to avoid the onset of a migraine is to treat the tension headache.

## Bodywork Options

A treatment regimen that includes bodywork, attention to body position, and stress management can help prevent or greatly reduce the frequency of headaches, in turn reducing your reliance on medication and the need to avoid food triggers. There are many different bodywork techniques, each with specific approaches for treating headaches. Following is a short list of techniques often effective in treating recurring headaches.

#### SWEDISH MASSAGE.

A tension headache, by its very name, implies the presence of stress and tension. Swedish massage, on the other hand, promotes relaxation and relieves muscle tension. When muscles become tight due to stress or poor posture, they eventually adapt a chronically shortened state. Swedish massage teaches the body how to let go of muscle tension and resets muscle tone.

#### INTEGRATIVE BODYWORK.

Rolfing, Hellerwork, Structural Integration, and CORE are examples of the types of bodywork designed to improve posture and structural alignment. A primary cause of chronic headaches is poor posture, which produces tension in the neck and shoulders because the weight of the head is not properly balanced on top of the spine. Integrative bodywork can produce lasting postural change for greater ease of movement. By selectively freeing the soft tissues, integrative bodywork literally can change postural alignment and remove the stresses and strains on the muscles that cause headaches.

#### DEEP TISSUE THERAPIES.

The integrative therapies mentioned above, as well as neuromuscular therapy and myofascial release, use similar techniques to free connective tissue. A chronically tensed muscle tends to maintain that tension, even after the stressful event has passed. Deep tissue techniques free the connective tissue glue, creating a new way for the muscle to function.

#### REFLEXOLOGY.

Like acupuncture, reflexology works to move energy blockages in the body. By stimulating points on the feet that correspond to organs in the body, reflexologists can promote relaxation, reduce pain, and restore energy flow. Several scientific studies have shown that reflexology is a viable treatment for migraines, in some cases working as well as, or better than, medication--and without the side effects.

#### CRANIOSACRAL THERAPY.

Craniosacral therapy addresses the inherent, gentle, rhythmic movement of the bones in the skull and their effect on the fluid that surrounds, bathes, and cushions the brain and spinal cord and runs throughout the body. Cranial bones move in miniscule amounts as a response to the production and absorption of cranial fluid. With head trauma, whiplash injury, or even severe stress, cranial bone movement can be compromised, resulting in headaches, dizziness, ringing in the ears, or vision disturbances. This therapy restores the normal movement of the cranial bones and fluid.

By addressing the root of the problem, regularly scheduled bodywork sessions can greatly reduce headaches as well as your need for medication. Remember, headaches are not normal, and you don't have to live with them.

**Reflexology has proven as, or more, effective than medication--without the many side effects.**

# Footprints for Health

You walk on them all day, but did you know your feet do more than carry you from one place to the next? They also have a unique connection to balanced health and well-being. In a form of bodywork known as reflexology, the feet are said to contain reflex areas that mirror and connect to all parts of the body--and pressure on these points can actually influence your state of health.

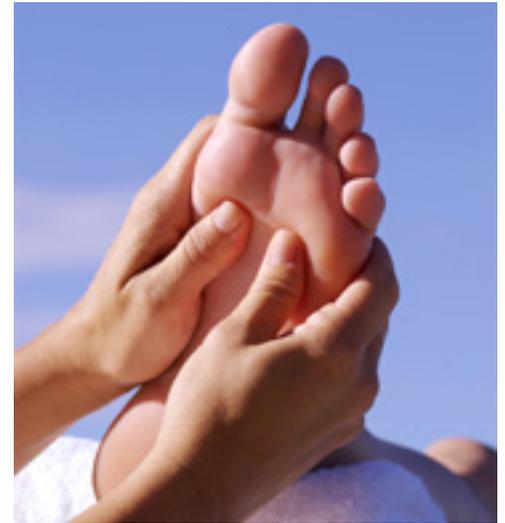

Reflexology is viewed primarily as a stress reduction or relaxation technique. Using the thumb, finger, and hand, gentle pressure is applied to reflex areas of the feet in order to decrease stress and bring the body into equilibrium.

Although simplistic in application, the effects of the treatment can be profound. Through activation of nerve receptors in the hands and feet, new messages flood into the body system, changing its tempo and tone. In essence, the foot or hand becomes a conduit for sharing information throughout the body. Function in the connecting area is

improved and, at the same time, the body experiences overall relaxation and benefits to the circulation and elimination systems. When the body's systems are at optimal functioning, self-healing is enhanced.

Scientific studies have documented the benefits of reflexology for a variety of ailments, ranging from reduction of pain, improvement in circulation, and release of tension, to improved effectiveness of medication, as well as benefits for diabetes and headaches.

In this sense, reflexology is not a medical treatment for specific symptoms or diseases, but rather a way to facilitate the body's inherent healing power.

**Treat your feet, and body, to reflexology.**

## The Appropriate Portion

### Small Diet Modifications Can Mean Big Changes

Dropping a few extra pounds may mean reversing the voice in your head that sounds suspiciously like your mother telling you to clean your plate. Here's why: eating just one hundred extra daily calories--which may come from finishing everything on your plate, even after you're full--can represent ten added pounds in a year. Conversely, and fortunately, reducing your daily intake by just a small amount can help you manage and even lose weight. Following are a few portion control tips to help you meet your goals.

#### **Eat at Home**

Dine in, and fill your own plate. Studies show that most people serve themselves smaller portions at home, but eat more when someone else fills their plate. Restaurant portions have grown significantly in recent years, in some

cases doubling, and research has directly tied obesity with regular dining out. When you dine at home, serve yourself only what you think you can comfortably eat. Store leftovers in individual serving containers, and freeze them or take them for lunch the next day.

#### **Slow Down**

Pay attention to how fast you're eating. Slowing down helps you eat less and better recognize when you're full. When you dine out, ask your server for a box. If you continue to pick at your plate while talking with friends, you'll soon eat the whole thing without even thinking about it. This mindless eating can account for a lot of calories.

#### **Divvy up Dinner**

Sharing an entree with your dining partner and ordering an extra salad is a

great way to avoid eating a large meal. If you're traveling and dining alone, try an appetizer and salad.

You've heard the reports: Obesity is one of the greatest risk factors for heart disease, degenerative arthritis, and cancer, and it's now epidemic in the United States with an alarming 66 percent of all adults obese.

The good news is watching your portions, slowing down, and being mindful of the food you consume can make a difference. Even your mother would agree, you don't always need to clean your plate.

*"We can try  
many ways to get  
rid of darkness,  
but none is as  
effective as  
simply  
increasing the  
light."*
