

The Face of Winter

How to Protect Your Skin in the Dry, Cold Months

Barbara Hey

Winter can be tough on skin, but there's much you can do to defend against the assaults of the season. The skin's primary role -- to protect the body -- is ever more important in extreme weather, and in most locations, that means extreme cold outside and dry, over-heated air inside during the winter. Your epidermis must "weather" these drastic fluctuations in temperature, and often the result is chapped, scaly, flaky skin.

Facing the Frost

The biggest wintertime concern is dehydration. In colder climates, you definitely need to increase the protection quotient. "You must

months. And this is especially important for the face. And if much time is spent outdoors skiing, snowboarding, or walking, for example, your complexion needs heavy-duty protection from brisk wind and winter sun as well.

"People often forget about sunscreen in the winter," says Schumann-Ortega. For regular outdoor time -- a few hours a day -- a sunscreen with an SPF of 20 should be sufficient. But if a winter trip on the slopes or shore is part of the plan, sunscreen with a higher protective factor is needed, even if your time is spent beneath an umbrella. "Both snow and sand reflect the sun," she says, so don't be caught unprepared. Double your efforts to protect the parts of the

over-treat skin to keep it hydrated," says Barbara Schumann-Ortega, vice president of Wilma Schumann Skin Care in Coral Gables, Florida. That means a shift from lighter skin care products used during warmer months to winter-weight products, such as thicker, cream-based cleansers and moisturizers. These will provide stronger barriers against the harsh environment of winter

face particularly prone to display the effects of dryness: The lips and the area around the eyes need a continual shield against the elements. Ask your skin care professional which products are appropriate for your skin type and effective, seasonal moisturizers and sunscreens.

"When it's cold, you lose blood flow to the skin," says Schumann-Ortega. The result is a dry, dull tone. Facial treatments can increase circulation and rejuvenate a healthy glow. But, Schumann-Ortega cautions, be careful with peels and resurfacing treatments during the winter, as they can do more damage than good with skin that's already taxed from the harsh environmental conditions.

Winterizing the Body

It's not just the face that suffers in the winter. Skin everywhere dries out, and gets that flaky look and uncomfortable winter itch. Hot baths -- a delightful antidote to the chill -- can further exacerbate dry skin. The solution? Add 10 drops of an aromatic essential oil to the bath to moisturize as you soak. (Lavender is particularly soothing to dry skin.) Then apply an emollient moisturizer -- a product that feels particularly thick and creamy to the touch, like a body butter -- geared for extra dry, rough, chapped, or cracked skin. Apply it immediately after drying off, when the skin can most readily absorb the lotion and restore its barrier. If dryness is still bothersome, indulge in a salt rub and full-body conditioning wrap to remoisturize.

And don't forget feet and hands. The feet, hidden by socks and boots all winter long, often go neglected this time of year and need attention, but the most obvious casualties of winter are the hands. Exposed to the elements and the subject of frequent hand-washing during the cold and flu season, hands can turn to rawhide just as holiday parties go into full swing -- not an elegant look for holding onto a champagne flute.

This is the season to slather hands with heavy, oil-rich cream at night and cover them with gloves. And don't forget feet: they also require the same special care. Consider a moisturizer for them in the evenings and sleep with socks on. In the morning, your feet and hands will feel soft and moisturized. Your skin care professional can recommend appropriate gloves, socks, and a home-care routine for this process. In addition, treat hands and feet to regular spa treatments to exfoliate dead skin cells, and paraffin treatments to replenish and moisturize.

Relax and Enjoy It

In winter, and all seasons, stress can disrupt even the best skin. "We always ask clients what's going on in life, since adrenaline, holiday pressures, and even joy can have an effect on body chemistry," says Schumann-Ortega. The skin reflects it all. "Some clients may come in after four weeks and they look like a train wreck," she says. So do your best to minimize the effects of stress with exercise, meditation, and proper diet. And don't skimp on the self-care. Schedule time for pampering, relaxing treatments.

Some final tips:

- Drink water. Even when there's a chill in the air and thirst isn't overwhelming, water consumption needs to be high to combat the dry air.
- Avoid products with a high percentage of synthetic ingredients (propylene glycol, petroleum), chemical detergents

(sodium laurel sulfates), and artificial colors and fragrances.

- Employ quality skin care products suited to your skin type.
- Check your medications. Illness and ongoing pharmaceuticals can upset pH balance.
- Incorporate nutritional supplements into your skin health regimen, such as essential fatty acids, zinc, magnesium, vitamin A, and B vitamins.

Winter doesn't have to take its long, hard toll on your skin. Ask your skin care professional about hydrating products and circulation-enhancing treatments to ease the long, dry months of winter. After all, spring is just around the corner.

When you're outside in harsh conditions, cover up with gloves, scarves, and sunscreen.

Magical Mango

Shelly Burns

Treating yourself to a mango is a perfect way to add some sunshine to your routine.

A mango is more than just a sweet, delicious fruit. It has properties beneficial to skin, including water-soluble vitamins like B2, B3, B6, folic acid (B9), and C. Mango is also a good source of beta-carotene and vitamin A.

Vitamin B complex delays skin's aging process. B vitamins provide a healthy glow, increased tone, and hydrated cells. The anti-inflammatory properties in B3 help skin retain moisture, alleviating dryness and irritation.

Vitamin C protects against the DNA damage that leads to skin cancer. This powerful antioxidant reduces the wrinkling effects of free radical damage, and combats other signs of aging by strengthening collagen and elastin.

Beta-carotene gives mango its wonderful

orange color and has an important role in protecting our skin's DNA. Dry, flaky skin can be remedied with the vitamin A derived from beta-carotene, which is important for repairing and maintaining healthy skin. Vitamin A has also been shown to help reduce and clear acne breakouts.

Other beneficial nutrients include magnesium, phosphorus, silica, sulfur, and vitamin E, which play a role in strengthening the connective tissue in our body, including skin, bone, hair, nails, and muscle.

Mango is not just beneficial to skin. Its nutrients reduce high blood pressure, the risk of stroke, and the chance of contracting heart disease. Mango also contains approximately 20 percent of the recommended dietary intake of fiber and enzymes, which promote healthy digestion.

Mango is especially helpful for long, dry winters, but you can enjoy it at any time

of year. It will help maintain smooth skin and a healthy glow.

Mango offers a variety of health benefits

Probiotics for Skin Health

Trust Your Gut on This One!

Shelley Burns, N.D.

Digestive health plays an important role in how skin appears on the surface. When digestion is not working optimally, it allows toxins to be reabsorbed in the body instead of being eliminated. The body then mounts a state of emergency as it's overwhelmed by toxins, some of them bad bacteria. These manifest directly on the surface for all the world to see, in the form of wrinkles, blotchiness, skin rashes, and acne.

This is where probiotics come into play. Probiotics contain potentially beneficial bacteria found in the digestive tract--what some call good gut bacteria. They help strengthen the digestive system but they also play an important role in skin health. Probiotics consist of Lactobacillus acidophilus, Lactobacillus bulgaricus, and Bifidobacterium

bifidum. They have anti-inflammatory, anti-pathogenic, and antiallergenic properties and can be used prophylactically and therapeutically.

There have been many studies showing benefits of probiotics to skin health. For example, there's a correlation between an imbalance of good and bad bacteria and the onset of acne. When bringing natural bacteria back into balance with a probiotic intervention, acne improves, in some studies, as much as 50 percent of the time.

There is no recommended daily intake for probiotics, but good food sources include buttermilk, kefir, miso, tempeh, yogurt, and other fermented foods. Supplements are generally higher in potency and are used for therapeutic purposes in treating irritable bowel

syndrome, Crohn's disease, colitis, and many other conditions.

While probiotics are essential for healthy skin and digestive health, there are many other appealing benefits to encourage their use, such as strengthening the immune system, replacing good bacteria after a course of antibiotics, and contributing to general health and well-being.

One note: Some probiotic supplements come from dairy sources and may not be suitable for individuals with dairy allergies or sensitivities.

"This nation will remain the land of the free only so long as it is the home of the brave."

-Elmer Davis

The massage experience is often well received. Share the gift to relax which releases tension that otherwise builds. What's better way than to help someBODY learn to release some stress? Offer someBODY a hour to rejuvenate. Yes, spread the word, "massage!"
